INSIDE MOUNT

Step A: Measure Width

Not all windows are perfectly square. Use smallest measured width. Round down to the nearest 1/8" measurement.

Example:

Measure: 33 9/16"

Order At: 33 3/8"

Step B: Measure Height

Similar to Step A but now round up to the nearest 1/8" measurement.

Example:

Measure: 64 9/16"

Order At: 64 1/2"

Notes:

- Mounted inside your windows frame
- 3/4" minimum DEPTH is required for an Inside Mount

OUTSIDE MOUNT

Step A: Measure Width

Measure the width you want to cover. If space allows, add 2-3" to help eliminate light. Round up to nearest 1/8"

Example:

Measure: 33 9/16"

Order At: 36 1/2"

Step B: Measure Height

Same as Step A, but for Height.

Example:

Measure: 64 9/16"

Order At: 64 1/2" (Frame to Frame)

Order At: 67 1/2" (Outside of Frame)

Notes:

- Mounted on top of your window's frame or outside of your frame
- No minimum DEPTH requirement

TOOLS:

- Drill Gun
- 1/8" Drill Bit (used to help not split wood or drill into metal framing)
- Hex Head or Phillips Bit (much easier installation with hex-head that has magnetic tip to hold the screw)
- Trash Bag

Parts Included:

- Mounting Brackets
- Screws
- Cord Cleat (If not Cordless or Motorized)

Steps:

- Remove your new window treatments from the box
- *When using a razor blade be sure to cut the tape around the box and avoid cutting in the center of the box where your window treatment is located.
- Remove packaging around the window treatment (rubber bands, plastic, bubble wrap)
- Place all packaging in trash bag (keep a tidy space)
- Place window treatment where your labels follow (this is the room location you created for each product, typically inside or on-top of the head rail)
- Place Brackets in front of window or in a box if you have similar shades through out your project to help with a good installation flow
- Install Brackets
- Install Window Treatment
- Install Cord Cleat (if corded and for child safety)

Bracket Installation:

Space brackets as to not to interfere with the mechanism inside the head rail. (if the head rail has a clean surface and you do not see any mechanisms do not worry install brackets accordingly)

Box Brackets:

Install on the Left Side and Right Side, if Center Bracket is included install in the center; be sure to avoid and account for any mechanisms in the head rail

Make sure bracket doors are up
